

ProcSentinel AI - Security Summary Report
Generated At: 2026-07-04T14:31:51.399229+00:00

Executive Summary

alerts: 15
allowed: 6
blocked_or_investigate: 1
critical_blocks: 1
pending_approvals: 0
reviewed: 5
sensitive_path_events: 5
total_gateway_decisions: 3
total_runs: 22

Analysis Run Summary

Risk Levels

- high: 5
- suspicious: 5
- low: 12

Decisions

- require_confirmation: 4
- review: 5
- allow: 6
- allow_with_monitoring: 6
- block_or_investigate: 1

Gateway Summary

Risk Levels

- critical: 1
- high: 1
- low: 1

Security Decisions

- block_critical: 1
- require_confirmation: 1
- allow_with_monitoring: 1

Lifecycle Statuses

- denied: 1
- rejected: 1
- approved_for_execution: 1

Approval Summary

total_records: 1

- rejected | 70/high | rm -rf ./cache

Alert Summary

total_records: 15

- high | High risk execution | The analysis result produced a high risk level.
- high | Command blocked by policy | The command was blocked before execution by the sandbox command policy.
- medium | Sensitive path access | The traced process accessed a sensitive filesystem path.
- medium | Sensitive path access | The traced process accessed a sensitive filesystem path.
- high | High risk execution | The analysis result produced a high risk level.
- high | Command blocked by policy | The command was blocked before execution by the sandbox command policy.
- high | High risk execution | The analysis result produced a high risk level.
- high | Command blocked by policy | The command was blocked before execution by the sandbox command policy.

Highest Risk Items

- gateway_decision | 100/critical | block_critical | denied | rm -rf /etc
- analysis_run | 70/high | require_confirmation | | rm -rf /tmp/final-demo-blocked-test
- analysis_run | 70/high | require_confirmation | | rm -rf /tmp/final-demo-blocked-test
- analysis_run | 70/high | require_confirmation | | rm -rf /tmp/final-demo-blocked-test
- analysis_run | 70/high | require_confirmation | | rm -rf /tmp/final-demo-blocked-test
- analysis_run | 70/high | block_or_investigate | | rm -rf /tmp/real-danger-demo
- gateway_decision | 70/high | require_confirmation | rejected | rm -rf ./cache
- gateway_decision | 25/low | allow_with_monitoring | approved_for_execution | rm -rf data/workspaces/default/cache

Recommendations

- Keep critical command blocking enabled for system and sensitive filesystem paths.
- Preserve alerts and audit records as evidence for the project defense.
- Highlight sensitive path detection in the live demonstration.
- Use monitored workspace execution as the safe path for controlled destructive commands.
